**Subject:** Re: Parchment Update

Good summary , Tom.

One other significant outcome of today's local and state interagency call was the decision that beginning tomorrow, Parchment residents and the media will receive more explicit explanation from the agencies on the LCR sampling and evaluation process that you've described above .

Parchment update:

- Do Not Drink order is still in effect; residents are getting bottled water.
- Private well testing continues; bottled water/POU filters being provided.
- PFAS sampling from the week of 8/15 show PFOA+PFOS in single digits; total PFAS in the 20's and 30's.
- MDEQ collected LCR samples during the week of 8/15:
  - The home that had 97 ppb the week before had a result of 11 ppb (which suggests particulate lead caused the previous spike)
  - 2 of the 8 lead samples results were at 16 ppb (above the action level of 15 ppb)
- MDEQ collected another round of LCR samples this week and expect the results on Friday 8/24.
  - This sampling includes sequential sampling as recommended by EPA.
- Parchment's best guess is that they have around 300 LSLs. They will have to do more work to identify the actual number.
- Lead public education language, including health effects, ways to minimize exposure will be going out to Parchment residents.
- Kalamazoo is offering lead testing to everyone, including Parchment residents.
- For the first year, Parchment will be a consecutive system to Kalamazoo. A decision will be made as to whether Parchment will become a part of Kalamazoo's system.

FYI:

- Currently in Kalamazoo, when a home is above the action level, they are provided a filter and their LSL is removed.
  - Same offer to Parchment ???
- MDEQ has provided Kalamazoo \$1M for their LSL replacement program.
